

# Fine metal mesh pattern processing

---

## ▪ **Metal mesh film heater**

Prevention of snow accretion and snow melting by using LED heads and rear lights instead of conventional halogens.

Measures against frost and snow melting on the windshield in front of the camera for automatic safety brakes for ADAS.

## ▪ **Metal mesh film antenna**

Supports 5G mini base stations and supports transparent antennas for buildings and vehicles.

Outer diameter of film substrate ~ A4 (PET / PC etc.) ...

\* Can be considered up to 300 x 300mm (conventional glass substrate can also be used)

Line or space 5 (3) to  $\mu$  m Cu wiring processing.

(consult us for conventional thin film patterning and plating build-up)

\* L / S of the pattern depends on the film quality, thickness, length and shape of the base material and resist material.
